API Schema	11
3.3 Update cart item quantity API	11
API Schema	11
3.4 Remove cart item API	12
API Schema	12
3.5 Place the order API	13
API Schema	13
6. Additional information	13

1. Introduction

In this session you have to create a UI for the API created in the previous session.

1.1 Description of project and tasks

In this task you have to implement 5 UI screens:

1. Create a login screen.
2. Create a product list screen.
3. Create an order list screen.
4. Create a cart screen.

1.2 How to submit your work

1. You have to submit all your in the git repository you have been provided with.
2. Your **README** file has to contain instructions on how to start your backend and frontend.
We prefer you provide executable files or a built/deployed solution.

2. Login screen

A user must be able to not access any pages other than the login screen without logging in. You don't have to handle such cases like the user reloading the application, you can just return the user to the login screen if that happens.

The user can login via the username and password. You must use the auth-service to login the user.

POST auth-service/authentication/login

Request body:

Unset

```
{
  "username": "john_doe",
  "password": "Password.123"
}
```

Response body (the access token):

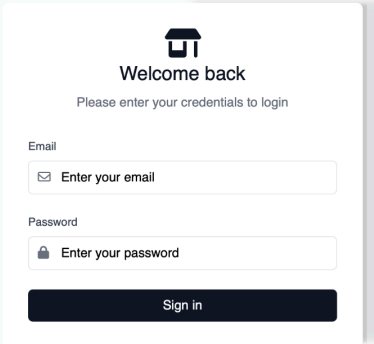

Unset

"eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJlbmlxdWVfbmFtZSI6ImpvaG5fZG9lIiwic3ViIjoiaYzE5N2E5MTktMDRkMS00YWE1LTlkZGMtNjlnN2Y4YmZjNDk4IiwibmJmIjojanZQ1NjkwMDg4LCJleHAiOjE3NDYxMjIwODgsIm1hdCI6MTc0NTY5MDA4OCwiaXNzIjoiaHR0cDovL2xvY2FsaG9zdDozOTI4MC9yZWFs bXMvaXZ0cyIsImF1ZCI6Im12dHMiQ.0-w130LAGqte7QUuDJu0lpSYRH-Ky4J5W1GYHkp4dTg"

You can later use this access token to access the APIs using the **Authorization** header in the following format:

Authorization: Bearer ...token...

Below you can find a wireframe for the login screen, it is just a guideline make your own choices in implementing it:

The wireframe shows a login screen with a light blue background. In the center is a white card with a dark blue header containing a house icon and the text "Welcome back". Below the header is the instruction "Please enter your credentials to login". The card contains two input fields: "Email" with an envelope icon and "Password" with a lock icon. Both fields have placeholder text "Enter your email" and "Enter your password" respectively. At the bottom of the card is a dark blue button with the text "Sign in".

4. The order list

Here the user can see their orders. Using a button the user should be able to see the details of the order.

Below you can find a wireframe for the order list screen, it is just a guideline make your own choices in implementing it:

Products
Orders

Orders				
ORDER ID	DATE	STATUS	TOTAL PRICE	ACTIONS
123e4...4000	2025-04-26 18:35	Created	\$99.99	Details

Order Details

Order ID:

123e4567-e89b-12d3-a456-426614174000

Date:

2025-04-26 18:35

Status:

Created

Order Items

Product	Quantity	Price	Total
Product Name 1	2	\$49.99	\$99.98
Product Name 2	1	\$29.99	\$29.99
Total			\$129.97

Close

3. The product list

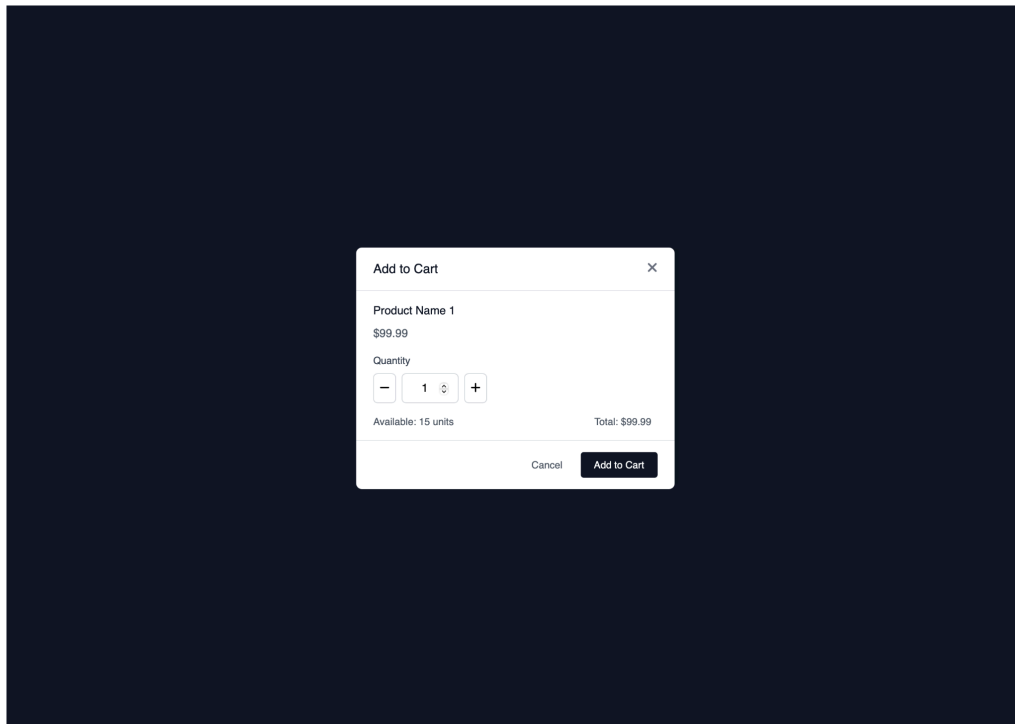

Here the user can see their products and add them to the cart using a button, the user should be able to specify the wanted quantity to be added to the cart via a modal or something like it. The user should have the ability to continue shopping or go to the cart.

Below you can find a wireframe for the product list screen, it is just a guideline make your own choices in implementing it:

Products Orders

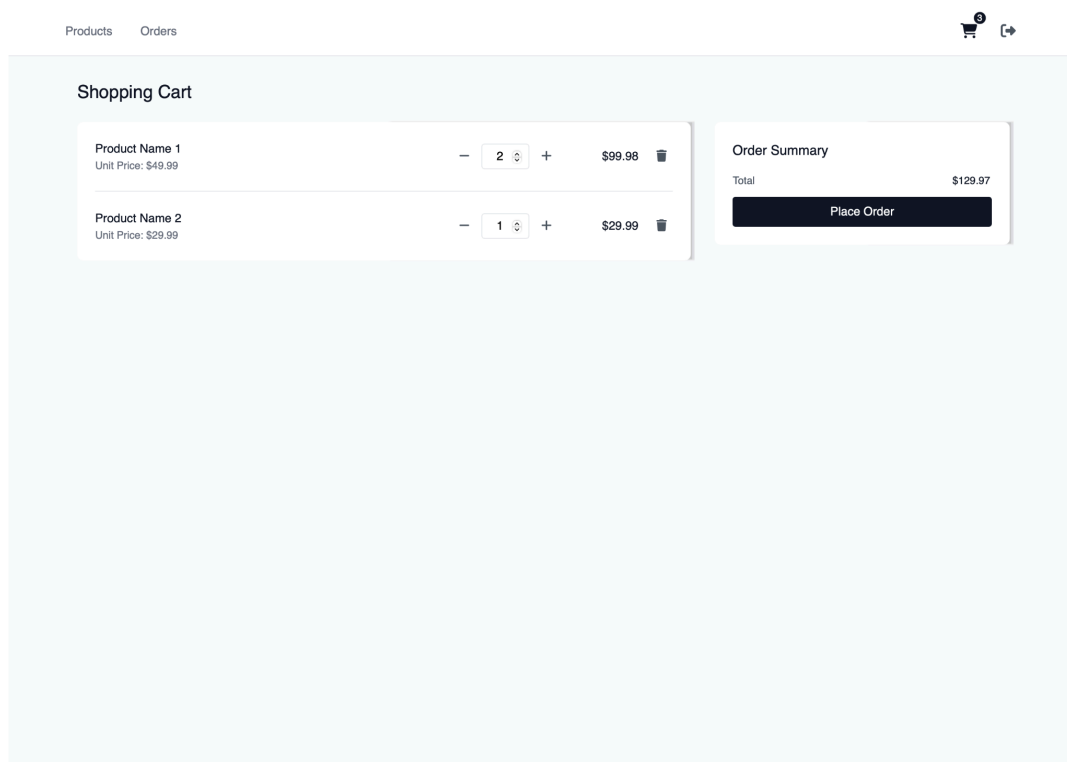

PRODUCT	AVAILABLE	STOCK	PRICE	STATUS	ACTIONS
Product Name 1	15	20	\$99.99	In Stock	<button>Add to cart</button>
Product Name 2	0	0	\$149.99	Out of Stock	<button>Add to cart</button>

5. The cart

Here the user will see their cart, or an empty screen if the cart is empty. The user should be able to remove items from the cart or update the wanted quantity. In case of finalization the user should be able to place the order in the system.

Below you can find a wireframe for the cart screen, it is just a guideline make your own choices in implementing it:

6. Additional information

- Some media, icons and text have been provided for you in the media files. You are free to use these, but you can also create your own, as long as the application is still fit for purpose. **You should not use any other media files (e.g. downloaded videos, images, icons, etc.).**
- Clean code and user interface accessibility are also important considerations.
- Do not hardcode API responses as another database will be used for testing.
